You are sending ASCII (text) emails out as HTML mails. If you have not developed a full set of HTML emails, do this:

1) Go to System Options and turn off the "Enable user select email type" option.
2) Set your default mail type to "text" on the same page
3) Go to each user that may have selected HTML mail type and switch them to Text in the admin user editor.

Email should be sent out formatted correctly now.
