In order to test your enom account, you must sign up for an enom test account. To do this:

- 1.) Login to <http://www.enom.com> with your account information.
 - 2.) Hover your mouse pointer over the "Reseller Tools" button at the top and a dropdown menu will appear.
 - 3.) Click on the "Test Account" button and set up your test account. Complete all 3 links on the page to complete your test account setup.
 - (optional) 4.) Once you set up your test account, you will go to <http://resellertest.enom.com> (enom's testing server) and sign in with your account information. If you want to, you can change your password on the testing server without changing your actual account password.
 - 5.) You will now login to your AWBS control panel and click on the "Configuration" button at the top.
 - 6.) In the "Domain Reg System Setup " section, click on "Registrar Setup"
 - 7.) On the following page, Click on the "view/edit" icon next to your enom account to edit it.
 - 8.) On the following page, type in your username and password for your test account. After that, set "Secure Mode" to false and "Test Mode" to True (so AWBS uses enom's testing server). The "Test Url" should be set to resellertest.enom.com/interface.asp
 - 10.) Scroll down and click the "Save" button at the bottom of the page to save your changes. Your enom account is now ready for testing.
- Click the [Test connection] link at the top of the enom setup page to test that you have a good connection to the test system.
