Check the logs (audit log), if you find an error such as this:

```
[Mon Oct 16 14:16:43 2006] [error] [client xxx.xxx.xxx.xxx] mod_security: Access denied with code 500. Pattern match "" at POST_PAYLOAD [severity "EMERGENCY"] [hostname "www.yourdomain.com"] [uri "/admin/optionsadmin.php"]
```

Turn mod security off or add this to your .htaccess file in the admin directory:
SecFilterEngine Off
