* The following must be done using the Plesk Admin Account

Log into your Plesk Admin Panel using your Administrator Account

1. Select Clients from the Left Menu -> Click the Clients name that you want to assign access to.
2. Click the Permissions Icon
3. Scroll down to almost the bottom of the Permissions list until you see 'Ability to use remote XML interface' (Usually 3rd from the bottom)
4. Put a checkmark in the box and Click the OK button.

That user should now have access to use the XML Interface that allows AWBS to integrate with your Plesk Panel server.
