---

### Symptoms:

Cart is empty when customer attempts to place order, login viewer of admin area does not show any logins.

This is typically seen after moving the AWBS site to a new server or after restoring a backup database.

### Fix:

Check your database using phpmyadmin (or your desired db management tool).

In each table, the ID field should show 'auto\_increment' in the 'extra' field.

If not, edit each table and set the extra field to a value of auto\_increment and save.
